CeEst Workplace- Companion & Staff Performance Enhancement Brief

This document provides the software development brief for the additional functionality approved for CeEst Workplace. It covers the new Companion experience, Workspace navigation changes, Task Assignment, and the Staff Performance Management framework.

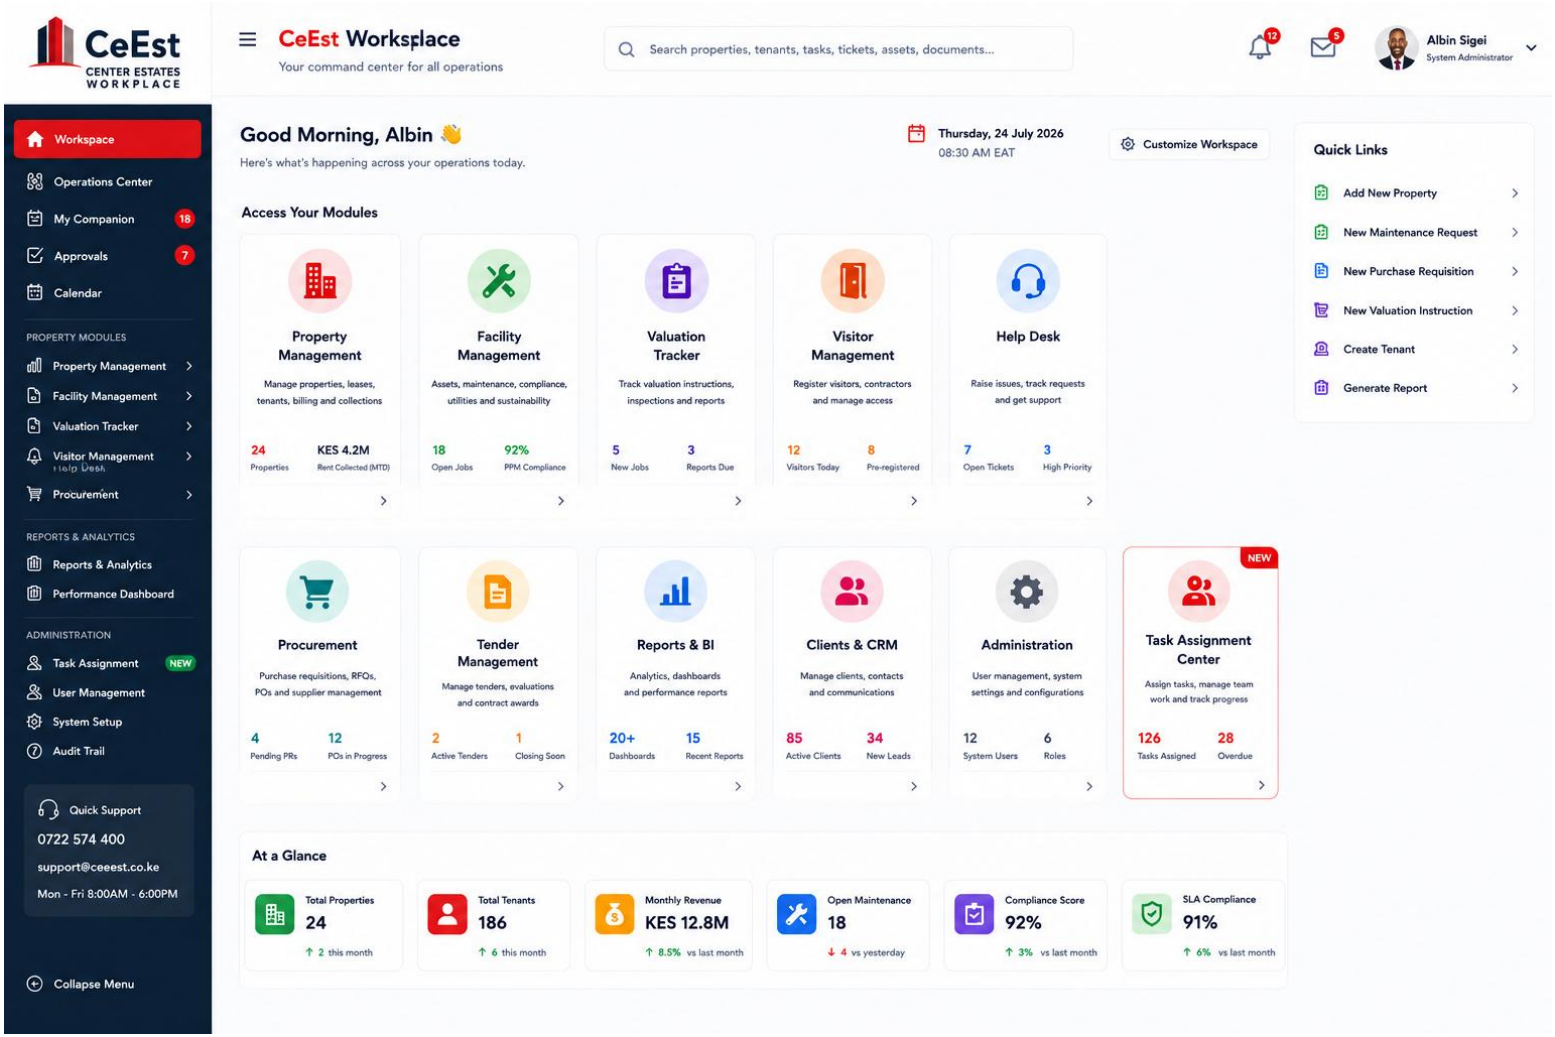

1. Workspace Navigation Changes

The Workspace remains the command centre. Two additions are introduced:

• My Companion - the first screen staff interact with after login.

• Performance Dashboard - available to administrators and managers to monitor productivity and system adoption.

The Workspace should retain its current design while adding these navigation items.

2. Staff Performance Management

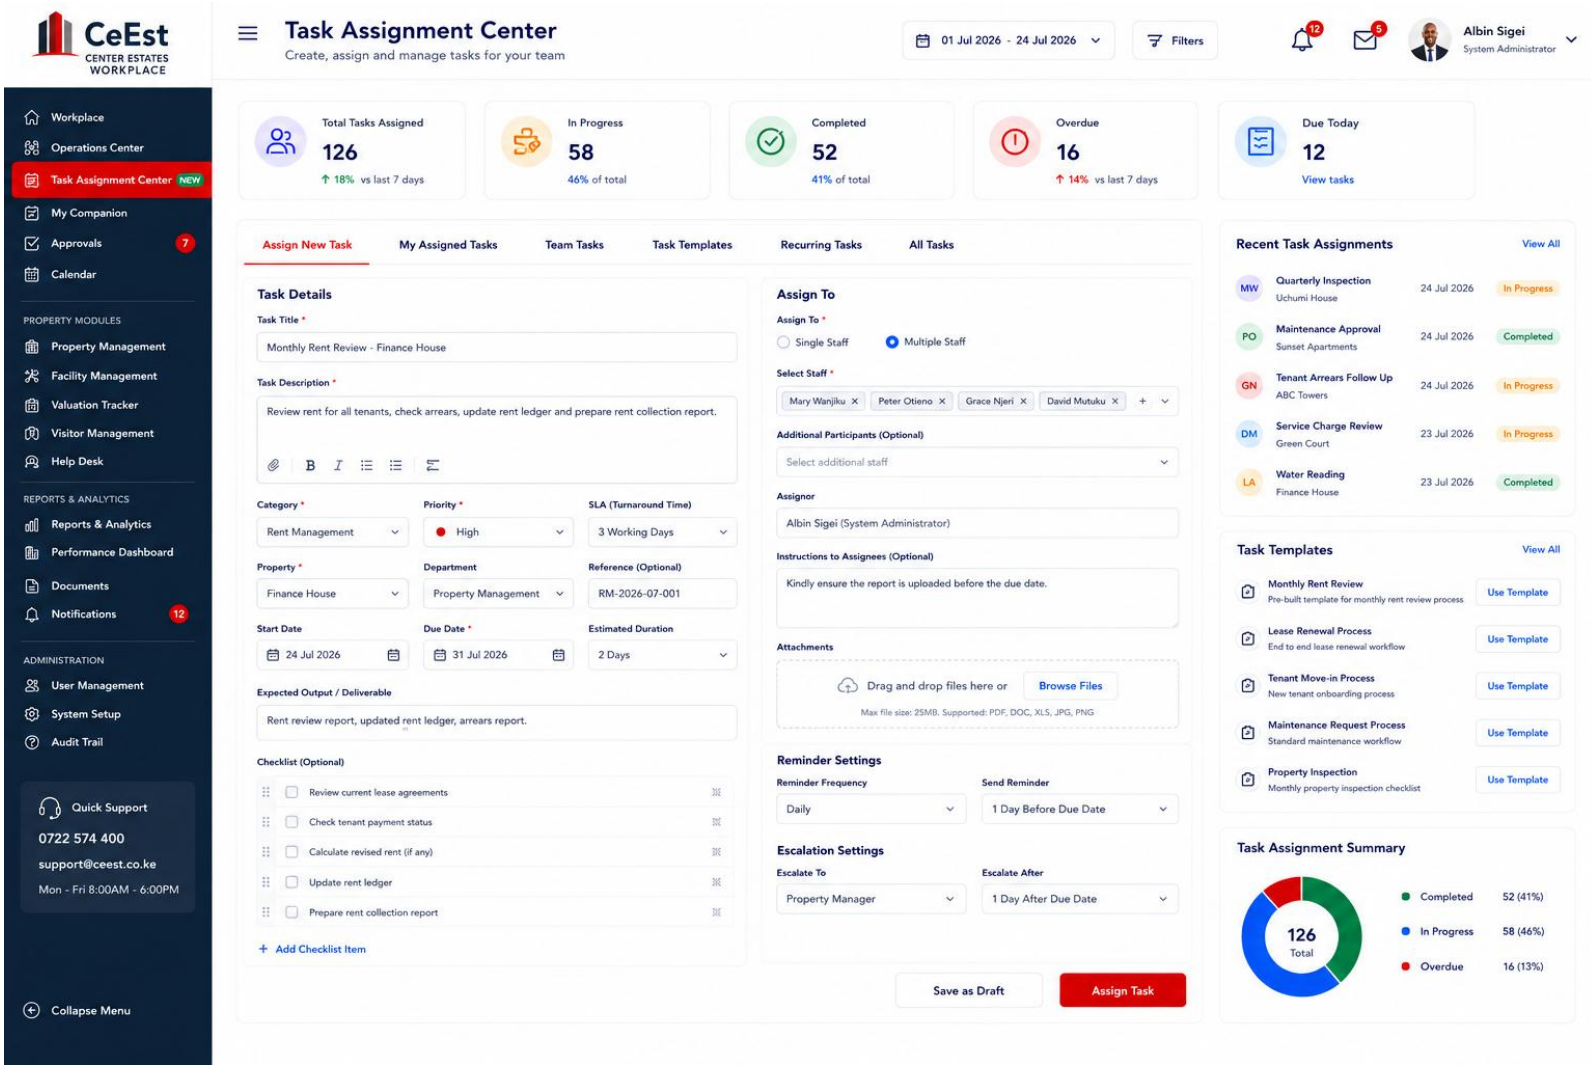

The Performance Dashboard is intended to measure both productivity and user adoption.

- Daily Active Users
- Last login for every user with date/month filters
- Average screen time
- Active vs idle time
- Module usage statistics
- Tasks assigned vs completed
- Overdue tasks by staff
- Staff requiring attention
- Escalated tasks pulled automatically from Companion
- Average Turnaround Time (TAT)
- SLA compliance
- Instructions received vs completed
- System adoption score
- Workload balancing across staff
- Drill-down into individual staff history

3. Task Assignment Centre

Managers and administrators can assign tasks to one or multiple staff. Tasks flow directly into each user's Companion. Support templates, recurring tasks, deadlines, priorities, attachments, reminders and delegation.

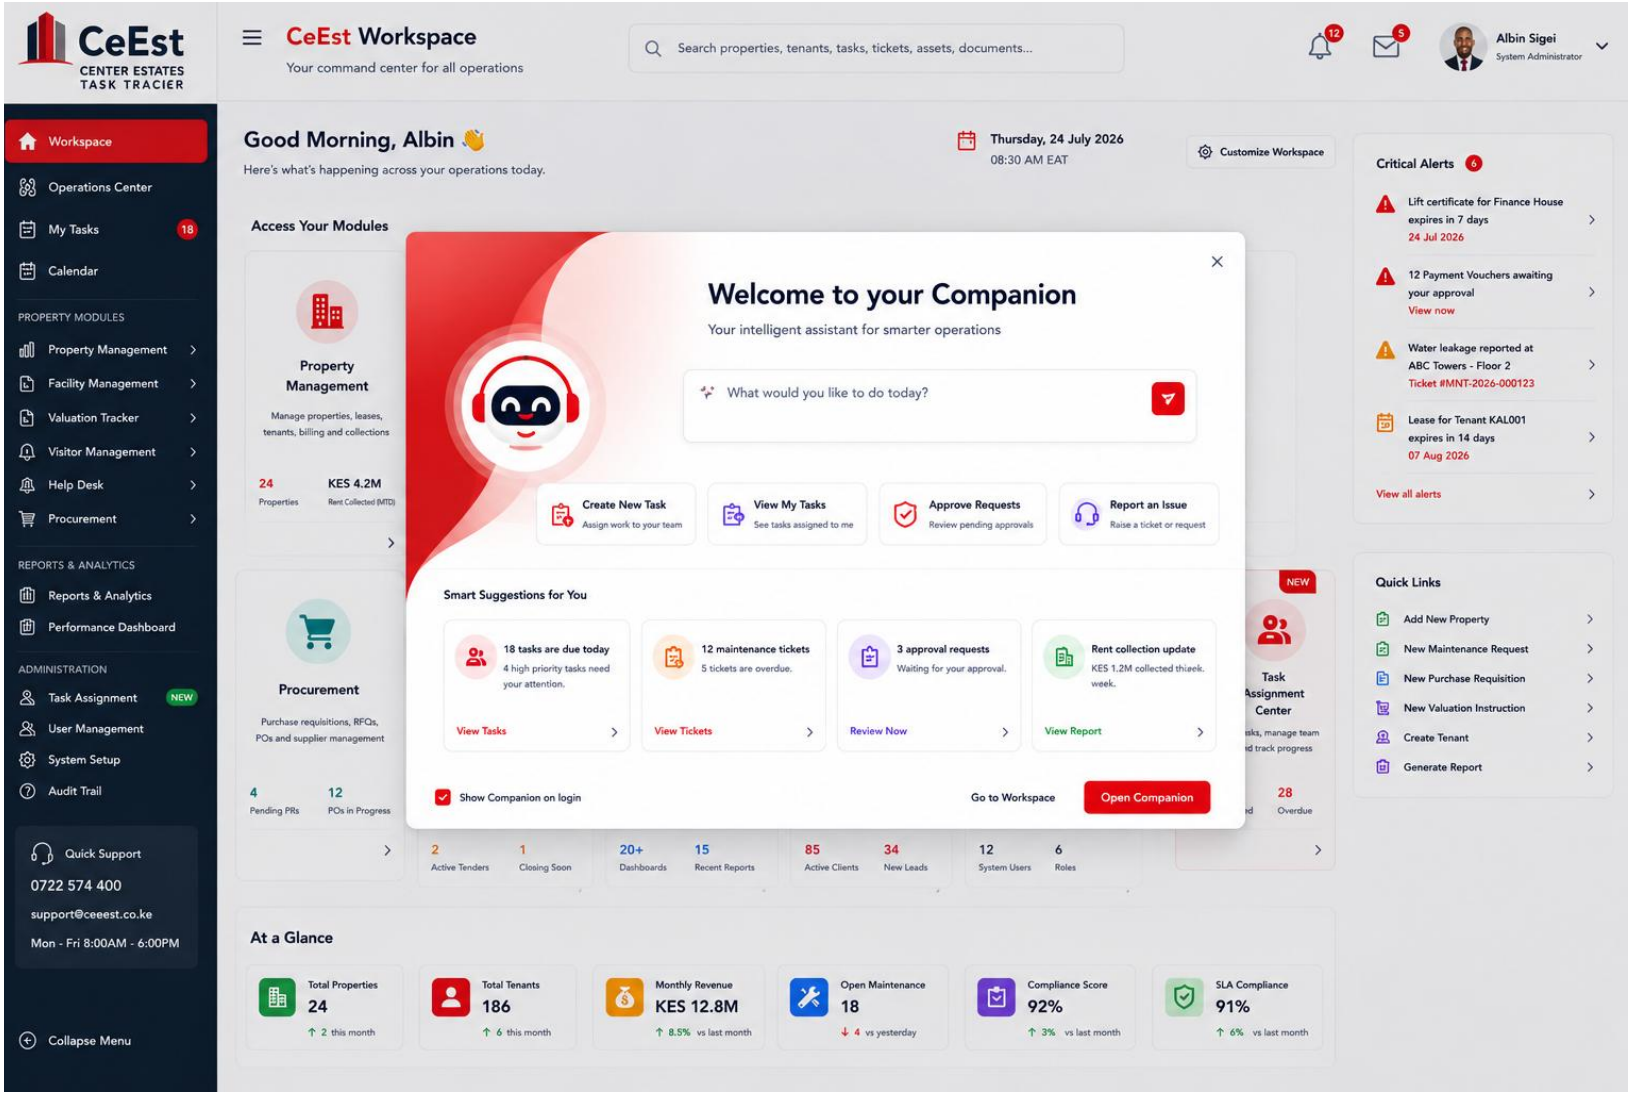

4. Companion Workflow

System events from Property Management, Facility Management, Help Desk, Procurement, Valuation, Visitor Management and Calendar automatically create Companion actions. Staff acknowledge, complete or delegate the work. SLA breaches automatically escalate to the Performance Dashboard.

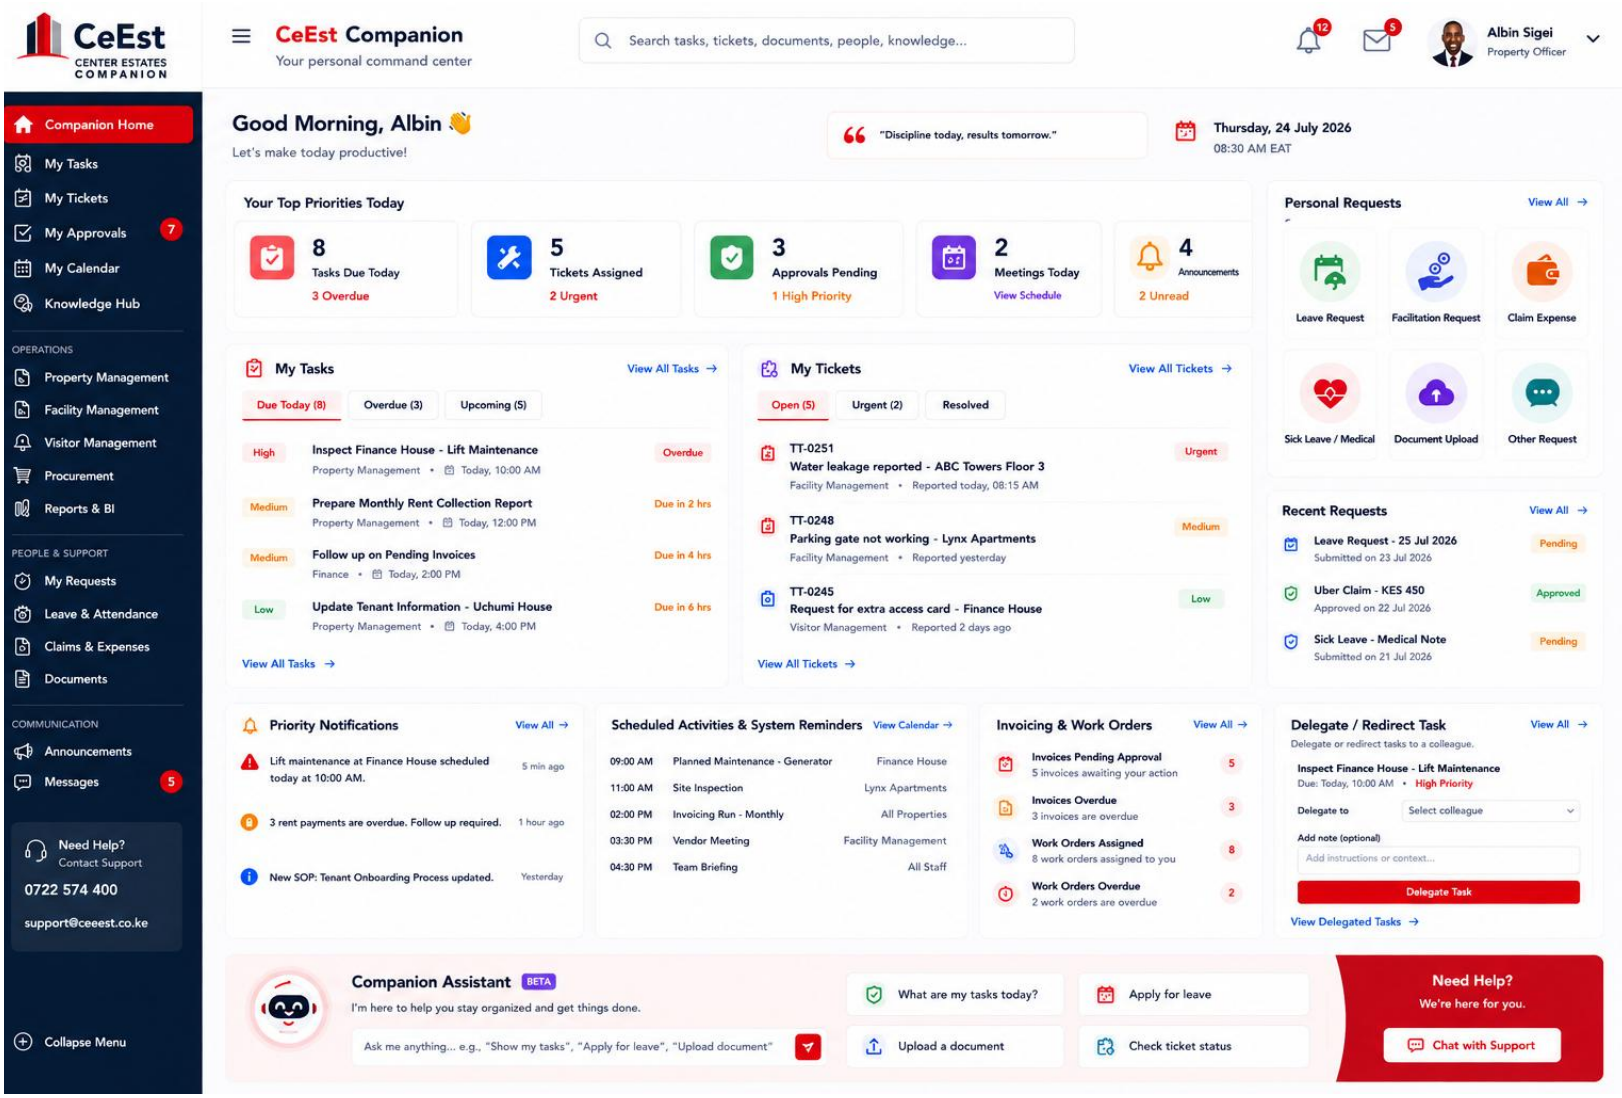

5. Escalation Logic

Companion -> Reminder -> SLA Warning -> SLA Breach -> Performance Dashboard -> Administrator Intervention -> Resolution. No overdue operational task should remain hidden inside an individual's dashboard.

6. UI Navigation

Insert the approved UI mock-ups in the final specification in this order:
1. Updated Workspace (with My Companion and Performance Dashboard navigation)
2. My Companion screen
3. Performance Dashboard
4. Task Assignment Centre
Each image should include annotations describing the new functionality.

7. Acceptance Criteria

- Companion opens by default after login.
- All scheduled ERP events appear automatically in Companion.
- Users can delegate tasks.
- Administrators can monitor adoption and productivity.
- Overdue work escalates automatically.
- Performance analytics support date-range filtering.
- Full audit trail maintained.
